DL: Сверточные сети Приложения

План

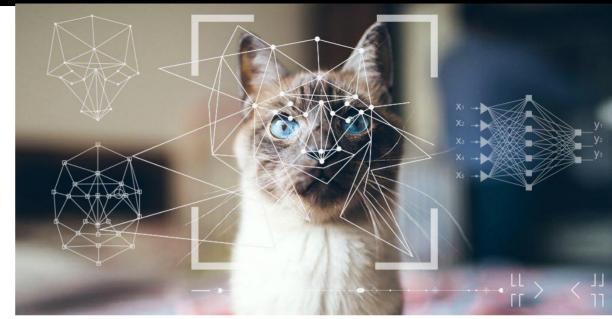

- Сиамские сети
- Автоэнкодер
- GAN

Передача обучения

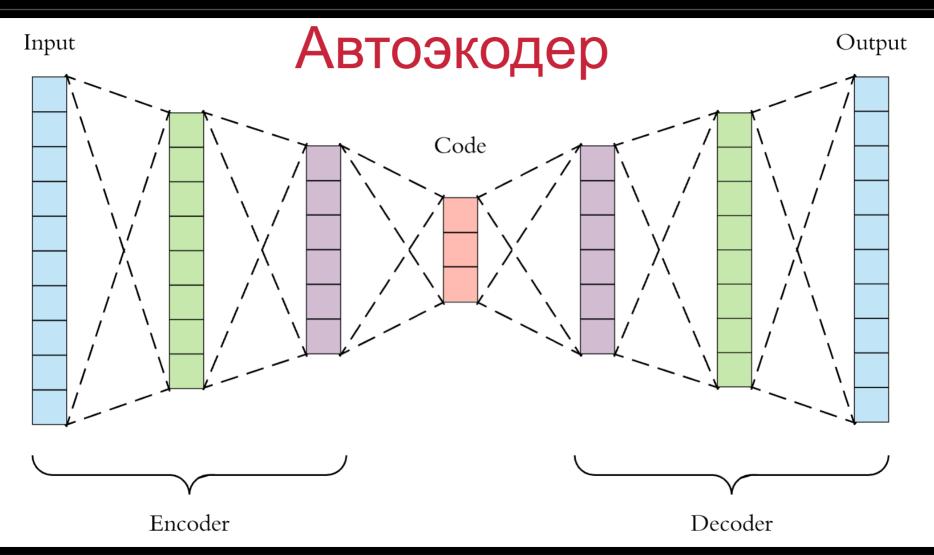

Сиамские сети

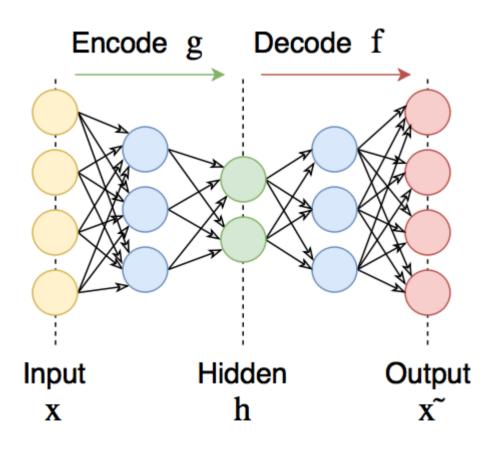

$$L = max(||F(A) - F(P)||^2 - ||F(A) - F(N)||^2 + \alpha, 0)$$

$$L = YD^{2} + (1 - Y)max(\alpha - D, 0)^{2}$$

Y=1 для изображений одного класса, Y=0 для изображений разного класса

Автоэкодер

$$h = g(x)$$

$$x = f(h)$$

$$E = \|x - g(f(x))\|$$

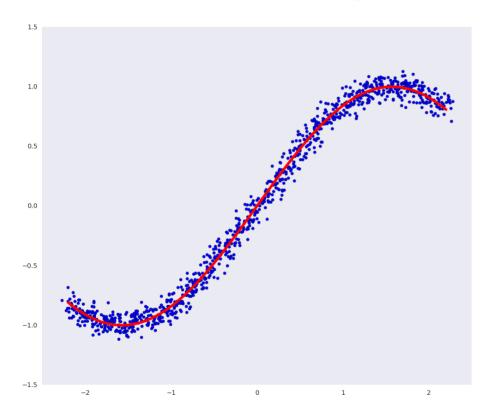

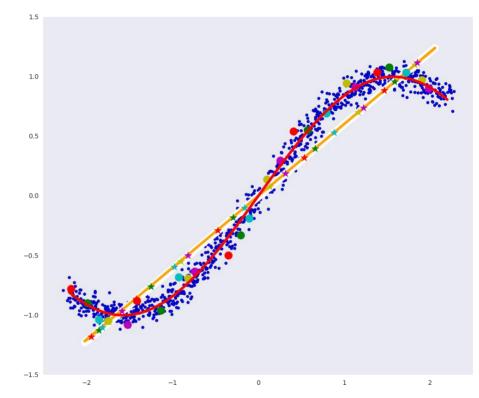

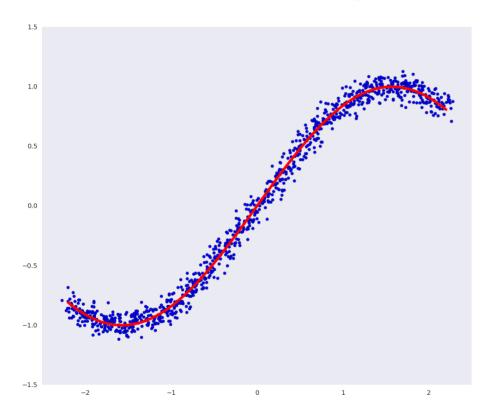

Автоэкодер: manifold learning

Автоэкодер: manifold learning

$$P(X) = \int_{H} P(X|h)P(h)dh \qquad P(X|h) = f(h) + \varepsilon$$

$$P(X;\theta) = \int_{H} P(X|h;\theta)P(h)dh \qquad P(X|h;\theta) = f(h;\theta) + \varepsilon$$

$$P(X|h;\theta) = N(X|f(h;\theta),\sigma^2I)$$

$$P(X) = \int_{H} P(X|h)P(h)dh \qquad P(X|h;\theta) = N(X|f(h;\theta),\sigma^{2}I)$$

Выберем подмножество $H' \in H$ из которого мы получаем множество X

Введем распределение Q(H|X) которое даст нам те $H{\sim}Q$, которые привели к X

$$KL[Q(H|X)||P(H,X)] = E_{H\sim O}[logQ(H|X) - logP(H|X)]$$

$$KL[Q(H|X)||P(H,X)] = E_{H\sim Q}[logQ(H|X) - logP(X|H) - logP(X)] + logP(X)$$

$$KL[Q(H|X)||P(H,X)] = KL[Q(H|X)||P(H)] - E_{H\sim Q}[logP(X|H)] + logP(X)$$

$$\log P(X) - KL[Q(H|X)||P(H,X)] = E_{H \sim Q}[\log P(X|H)] - KL[Q(H|X)||P(H)]$$

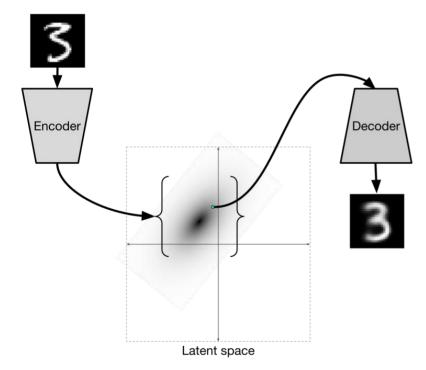

$$P(X) = \int_{H} P(X|h)P(h)dh$$

$$\log P(X) - KL[Q(H|X)||P(H,X)] = E_{H\sim O}[\log P(X|H)] - KL[Q(H|X)||P(H)]$$

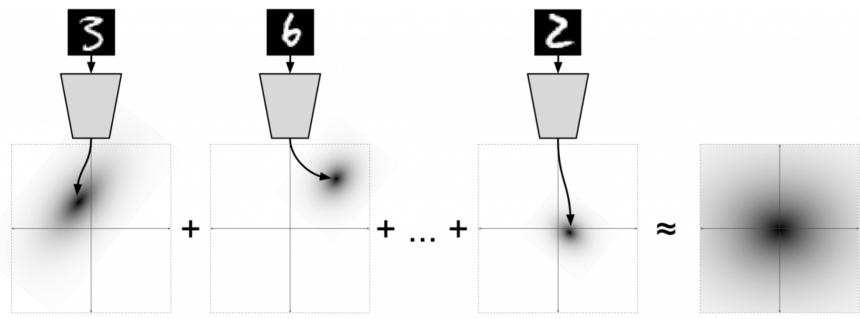

$$\log P(X|\theta_2) - KL[Q(H|X;\theta_1)||P(H,X;\theta_2)] = E_{H\sim Q}[logP(X|H;\theta_2)] - KL[Q(H|X;\theta_1)||N(0,I)]$$

$$Q(H|X;\theta_1)-?$$

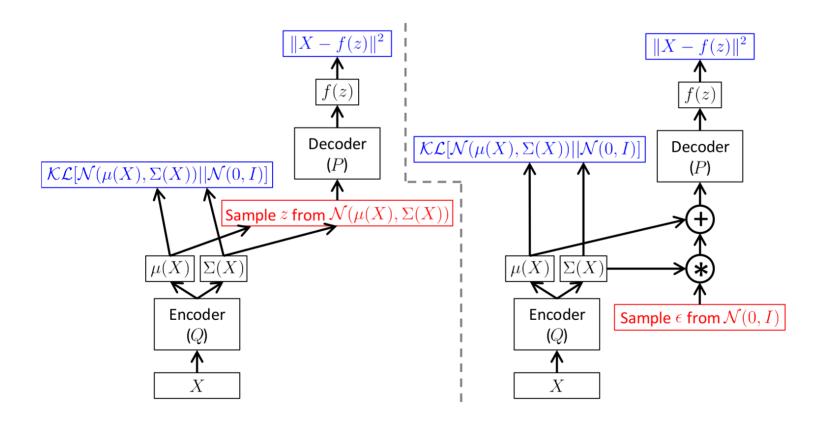

$$Q(H|X;\theta_1) = N(\mu(X;\theta_1), \Sigma(X;\theta_1))$$

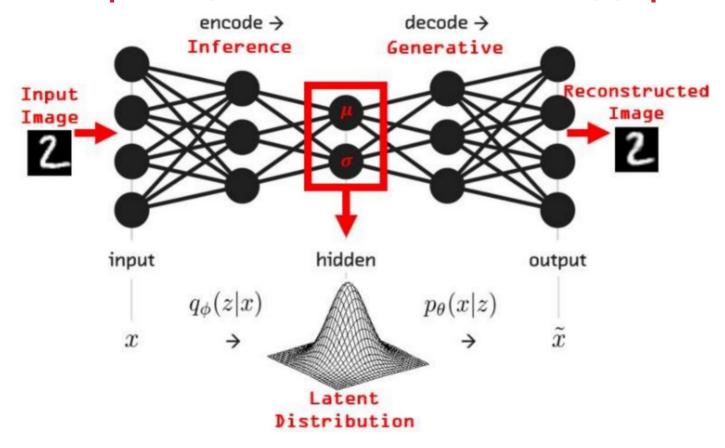

$$P(H|X) = N(\mu(X), \Sigma(X)) \qquad P(H) = N(0, I)$$

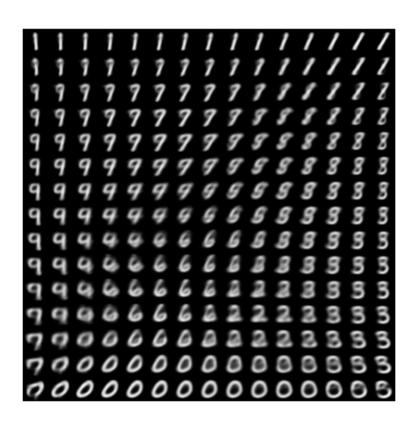

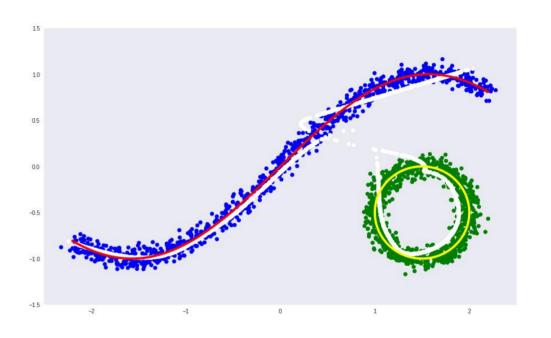

$$KL[Q(H|X; \theta_1)||N(0,I)] = 0.5(tr(\sum X) + \mu(X)^T \mu(X) - k - \log \det \sum (X))$$

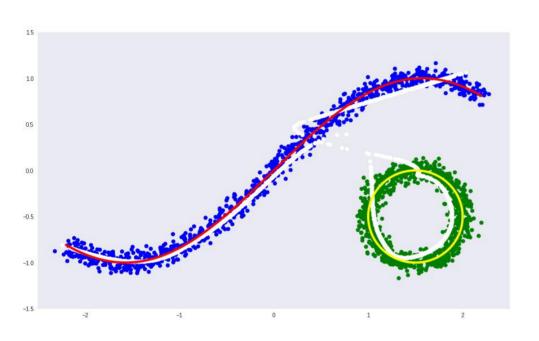

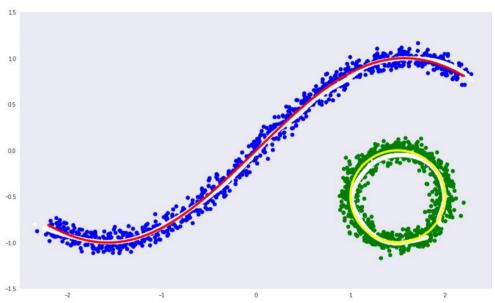

VAE: недостатки

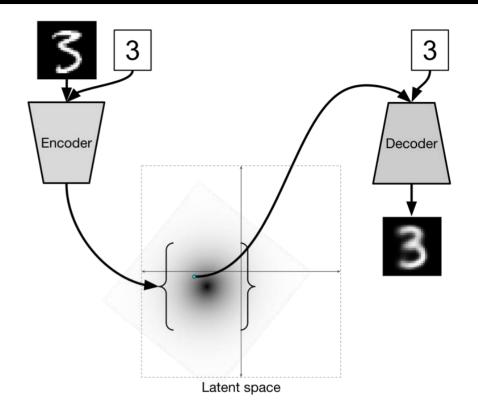

Conditional VAE

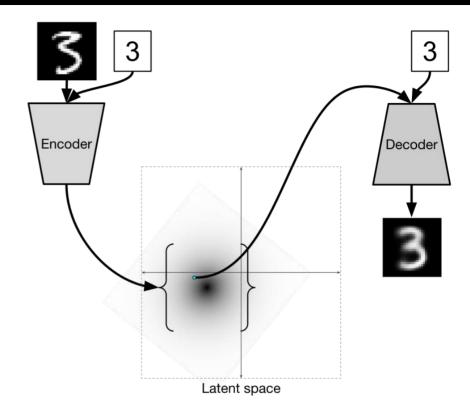

Conditional VAE

 $\log P(X|Y;\theta_2) - \mathsf{KL}[Q(H|X,Y;\theta_1)||P(H|X,Y;\theta_2)] = E_{H\sim Q}[\log P(X|H,Y;\theta_2)] - \mathsf{KL}[Q(H|X,Y;\theta_1)||N(0,I)]$

Conditional VAE

https://github.com/lyeoni/pytorch-mnist-VAE/blob/master/pytorch-mnist-VAE.ipynb

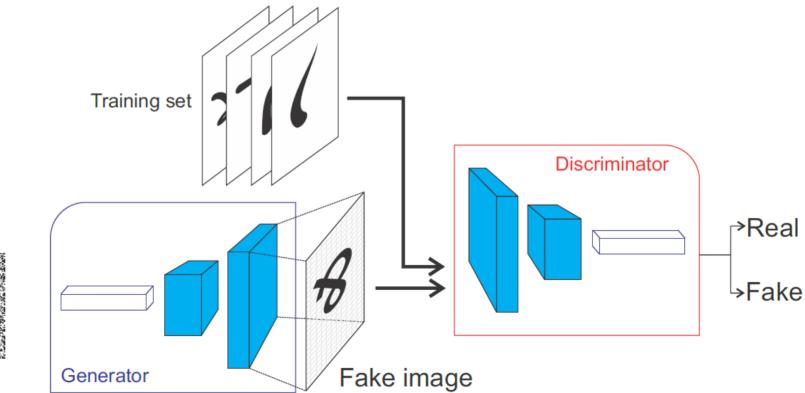

https://github.com/lyeoni/pytorch-mnist-CVAE/blob/master/pytorch-mnist-CVAE.ipynb

Conditional VAE: перенос стиля

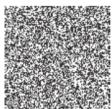

- Обучаем CVAE на картинках с метками
- Кодируем стиль заданной картинки в Н
- Меняем метки Y, создаем из закодированного H новые картинки

GAN

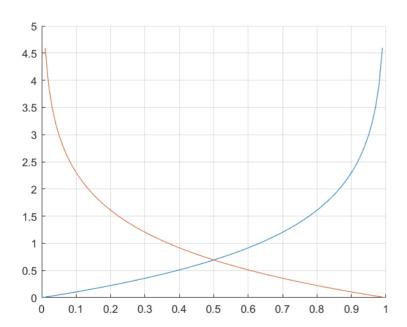

Random noise

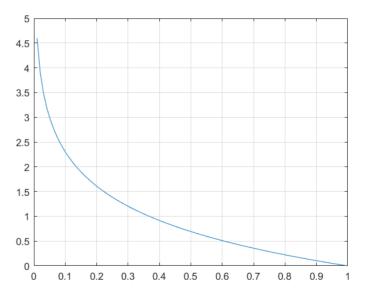

GAN

$$-E_x[\log(D(x))] - E_z[\log(1 - D(G(z))]$$

$-E_z[\log(D(G(z))]$
